

BEERA BHAVANI SANKAR

AI/ML Engineer • Full Stack Developer

7396179921 | beerarahul2@gmail.com | linkedin.com/in/bhavani-sankar-beera | github.com/RAHUL236733

PROFESSIONAL SUMMARY

Final-year B.Tech (AI & ML) student with an 8.4 CGPA, strong foundations in machine learning, deep learning, and full-stack development. Hands-on builder of production-style AI applications — including an LLM-powered internship recommendation engine and a deep learning skin disease classifier. Certified in Generative AI and Artificial Intelligence from Infosys Springboard. Published researcher in Deep Reinforcement Learning applied to financial markets. Seeking entry-level roles in Software Engineering, Machine Learning, Data Science, or AI/ML Engineering.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, SQL

Web & API Development: React.js, FastAPI, Django, REST APIs, HTML5, CSS3

AI / ML & Deep Learning: Scikit-Learn, TensorFlow, EfficientNet, OpenAI API, LLM Prompting, Vector Embeddings, NumPy, Pandas, Matplotlib

Generative AI: Prompt Engineering, RAG (Retrieval-Augmented Generation), GPT Embeddings, LLM Integration

Databases: MySQL, SQLite, Django ORM

Core CS Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems

Developer Tools: Git, GitHub, VS Code

Soft Skills: Problem Solving, Teamwork, Communication, Adaptability, Self-Motivation

INTERNSHIP EXPERIENCE

Python & Django Developer Intern — Topnotch Pvt. Ltd • Remote

July 2025 (1 Month)

- Designed and delivered a full-stack Library Management System with Python and Django, automating book issuance, return tracking, and inventory workflows end-to-end.
- Built robust Django ORM models for books, members, and transactions — replacing manual record-keeping and significantly improving data retrieval efficiency.
- Implemented JWT-based user authentication and role-based access control (admin vs. member), enforcing authorization policies across the application.
- Earned Python with Django Web Application Development Certification upon successful project sign-off.

PROJECTS

AI-Powered Internship Recommendation Platform

React • FastAPI • OpenAI API • Python • Vector Embeddings • 2025

- Architected a full-stack LLM-powered recommendation engine that parses uploaded resumes, extracts semantic features, and ranks internships using OpenAI GPT embeddings.
- Engineered vector-based semantic matching between resume content and internship descriptions — enabling context-aware, personalized ranking beyond keyword search.
- Built end-to-end user experience with secure authentication, resume upload, dynamic filtering, and real-time recommendations via React front-end and FastAPI back-end.

DermaVision — AI Skin Disease Classifier

Python • EfficientNet • FastAPI • React • SQLite • Deep Learning • 2025

- Built a deep learning multi-class skin disease prediction app using a fine-tuned EfficientNet model, classifying dermatological conditions from user-uploaded images.
- Integrated a React front-end with a FastAPI back-end and SQLite database to deliver a responsive, production-style diagnostic tool accessible via web browser.
- Applied transfer learning and image augmentation techniques to improve model generalization on limited medical imaging data.

Library Management System

Python • Django • MySQL • 2025

- Developed a web-based library platform for book inventory, member management, and borrowing history, eliminating manual logbook dependency for library staff.
- Implemented Django ORM models and admin dashboard, with role-based views for staff and members.

Basic Calculator

- Built a responsive, fully functional browser-based calculator demonstrating proficiency in DOM manipulation and event-driven JavaScript programming.

RESEARCH & PUBLICATIONS

Bitcoin Price Prediction Using Advanced DQN Technologies	2024–2025
• Authored a research paper applying Deep Q-Network (DQN) reinforcement learning to model and predict Bitcoin price movements from historical OHLCV market data. • Investigated DQN agent behavior in volatile financial environments, bridging deep reinforcement learning with quantitative finance — contributing to applied ML research.	

EDUCATION

B.Tech in Information Technology (AI & ML)	2023 – Present
GMR Institute of Technology, Rajam, Andhra Pradesh	CGPA: 8.4 / 10.0
Intermediate (MPC)	2021 – 2023
Sri Chaitanya Junior College, Rajam	91.3%
Secondary School Certificate (SSC)	2021
Government High School, Rajam	98.6%

CERTIFICATIONS

■ Principles of Generative AI — Infosys Springboard	May 2026
■ Artificial Intelligence Primer — Infosys Springboard	May 2026
■ Python with Django Web App Development — Topnotch Softwares	2025
■ Deep Learning Essentials — L&T EduTech	2024
