Hiring Manager

[Company Name]

[Company Address]

Dear Hiring Manager,

I am writing to apply for the AI/ML Engineer or Software Developer position at [Company Name]. As a final-year B.Tech student specialising in Artificial Intelligence and Machine Learning at GMR Institute of Technology with an 8.4 CGPA and a published research paper in Deep Reinforcement Learning, I bring both rigorous academic depth and practical, production-oriented engineering experience to every problem I work on.

My published research applies Deep Q-Network (DQN) reinforcement learning to model and predict Bitcoin price movements from historical OHLCV market data — a novel application bridging deep reinforcement learning with quantitative finance. This work required me to investigate DQN agent behaviour in volatile financial environments, design the learning pipeline from first principles, and contribute original findings to applied ML research. It reflects the systematic, curiosity-driven approach I bring to every technical challenge I undertake.

Beyond research, I have built systems with genuine real-world applicability. My AI-Powered Internship Recommendation Platform uses OpenAI GPT embeddings and vector-based semantic matching to parse uploaded resumes and rank internships with context-aware personalisation — delivered via a React front-end and FastAPI back-end. I also built DermaVision, a deep learning skin disease classifier using a fine-tuned EfficientNet model with transfer learning and image augmentation, integrated into a production-style web application. Both projects demonstrate my ability to bridge ML research and full-stack engineering.

During my Python and Django Developer internship at Topnotch Pvt. Ltd, I designed and delivered a full-stack Library Management System — automating book issuance, return tracking, and inventory workflows end-to-end, with JWT-based authentication and role-based access control. Delivering a production-ready system independently within a one-month engagement tested both my technical depth and my execution discipline under professional pressure.

I am certified in Generative AI and Artificial Intelligence from Infosys Springboard, and hold further certifications from L&T EduTech, HackerRank, and GeeksforGeeks. My technical breadth spans Python, Java, JavaScript, React.js, FastAPI, Django, TensorFlow, EfficientNet, OpenAI API, RAG, Prompt Engineering, Vector Embeddings, and SQL — alongside a strong foundation in Data Structures, Algorithms, OOP, and DBMS.

I am driven to build AI systems that are not only technically sophisticated but genuinely useful, and I believe [Company Name]'s work in [their domain] reflects exactly that standard. I would be delighted to discuss how my research background, engineering skills, and project track record can contribute to your team. I am available at your earliest convenience and happy to share project demos or code on request. Thank you sincerely for your time and consideration.

Yours sincerely,

Beera Bhavani Sankar
